

# A powerful system for Mac and Windows

**Chiral Systems** is a flexible, intuitive dental practice management system. Initially designed for the high-end private practice, the system has recently developed to accommodate NHS reporting and orthodontic charting

The software was born as a response to a market demand for a niche, innovative, bespoke product. As a result, Chiral is easy to learn and use, is priced competitively and allows for integration with new technologies that are vital in today's market. In an industry where the focus traditionally was only on clinical and patient care, with little or no financial discipline, practices are becoming increasingly commercially aware of their business' financial performance. That is why high-tech innovations are key to helping businesses reduce costs, initiating eco-friendly alternatives, while maintaining the highest standards of patient and practitioner safety.

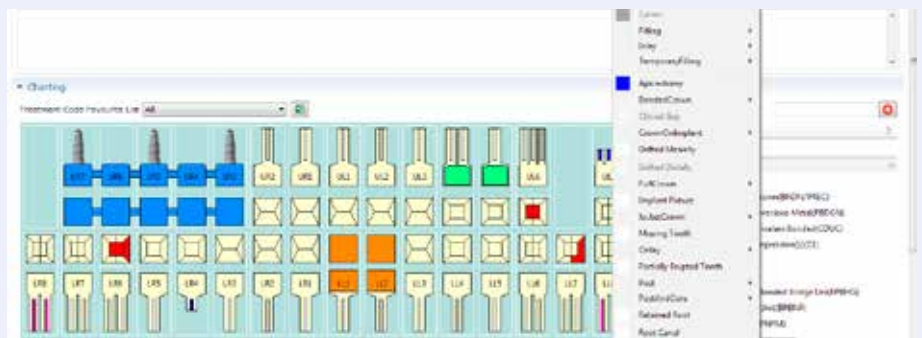

## Key features

The feature-rich system allows for simplicity and user friendliness with full and easy access to the practice information. Built-in navigation enables the user to move around the system in an intuitive and consistent way.

**Multiple diaries:** At the heart of the system is the option for multiple diary views - practice diary, week's diary and clinician's diary - any of which can be used to suit the individual practice.

**Creating appointments:** Booking appointments couldn't be easier! The appointments are simply dragged and dropped into the diary and can be stretched to the required length of time, with just one click.

**Recalls and reminders:** These two features are of vital importance as they ensure that patient flow through the practice is kept at a maximum, whilst keeping the patient up to date with their appointments. For this reason, the contact method includes both email and SMS, allowing the sending of recalls and reminders at the touch of a button. The message sent to the patient is completely customisable by the practice and

Chiral's innovative charting system includes a full root view of the teeth allowing for greater visual information

currently the most competitively priced.

**Template customisation:** This feature puts the practice in charge of their templates, allowing for free customisation, enabling the practice to make changes whenever required.

## Business management

**KPIs:** Chiral Systems' collaboration with an accountancy firm specializing in financial advice to dentists, has resulted in the development of a number of unique key performance indicators and other financial reports, unavailable in other systems.

**Reporting:** The ability to create reports covering the essentials for good practice management, is flexible, as layout and appearance of each report is totally definable by the practice; reports are defined in a standard word process format enabling the practice to easily change the look of any report, invoice etc., as required, allowing for easy and accurate tracking of income within the practice.

**Housekeeping and preferences:** Access to the system can be controlled, meaning that sensitive reporting information is not available to all users, but still allowing them to do the job that is required of them.

**Treatment definitions:** treatment favourite lists, cost centres, account groups, external referrers, medical conditions, cancellation

reasons, can all be created and edited.

**Charting:** Chiral Systems provides the clinician with full base and treatment charting and periodontal charting. Base and treatment charting is incorporated into the appointment and patient views of the system giving maximum working flexibility.

A full root view of the teeth allows for greater visual information to be presented to the user. Items such as root fillings, apicectomies are clearly displayed, as well as implants, bridges and dentures. The chart can be printed, emailed and stored in the patient records as well as the treatment plan.

## System of choice

Chiral Systems is becoming the system of choice, not only because of its unique features and ease of use, but the proven outstanding customer support provided by a team of committed business and dental professionals based in London's West End. Chiral Systems also offers simple payment terms with no hidden costs, free links to the major X-ray systems providers, and continuous development of the software based on the clients' feedback and requirements.
